High Performance Computing

Date of Completion: 4.9.2020

Title - Parallel Sorting Algorithms

Broblem Statement: - Por Bubble Sort and Merge Sort, based on existing sequential algorithms, during & implement parallel algorithm utilizing all resources available.

Objectives: Study parallel execution of sorting algorithm
Study open MP for parallel computing.

Outcomed: - Students will be able to
- Implement sorting algorithms in open MP.

Sophvare Mardware Requisement: - Ubuntu OS, open MPAPT, editor.

Parallel Bubble Sort

i) Implement as a sipeline
ii) Let localize = n/no of processor
iii) We divide the array into blocks and each process

FOR EDUCATIONAL USE

execute the bubble soit on the past including comparing element with the first one belonging to the next thread in Emplement with loop for j=0 to not.

To each iteration of each thread needs to wait until previous thread has finished that iterations vi) Synchronization made to be used is barrier. i) Parallel Merge Sort.
i) Truse steps are preformed
) Pivide a) longuer ii) Coclet sort list onto one processor

iii) Merge implements as they come together

iv) Simple true structure is stained. Algorithm Bubbb Sort for k=0 ton-2 if k is even then for i = 0 to n/2-1 do in parallel if A[i] > A[zitl] then Swap A[zi] & A[zitl] che for i=0 to n/2-2 do in parallel if (Alei+1) > A(2i+2) then swap Alziti7 & Alzitz] end for end for end for Kraft o paper TM

-		
	Parallel Merge Sort mid > Size/2	
1.	mid > Size/2	
	1 both children present in thee then	
	Send mid finitalil	
	Send mid, firstchild send hist, mid, firstchild send hist from mid, size mid, secondchild call merge (list 0, mid, list, mid+1, size, temp,	
	Send fit mid listelil	
	send hist him in discount on allil	
	cal marge list a said little will be	
	matt, size, temp,	
	Store temp in another area 12/	
	else Store temp in another away List	
	call Parpellel Mora elect (list a circ)	
	it iso then	
	if i 20 then size, parent	
	, , , , , , , , , , , , , , , , , , ,	
1	Analysis	
	Fine Complexity Bubble Sort. Merge Sort Sequential Best O(n) O(n logn) Averge O(n) O(n logn)	
	Sequential Best O(n) O(nlogn)	
	Averge o(n1) o(nlogn)	
	Eurallel Best O(n) O(n)	
	Averge O(nlogn) O(nlogn)	
	Test (ase:-	
-	for n = 1000 Bulble Sort Nerge Sort Time for parallel execution: - 0.0039 mo 0.00017 Time for seriel execution: - 0.0021 mo 1.8	
	Time for parallel execution: 0.0039 me 0.00017	
	Time for seriel execution: - 0.0021 \$ 1.8	
	Time for societ orecurrent.	
	for n = 100	
	Parallel execution time: - 0.00093 0.00018	
	serial execution time: - 0.00003 1.6	
	VALUMIUI IIIU. D.00000	

Conclusion: Thus I completed the sorting algorithms using parallel reduction and understood the algorithms.
